Completed features

1. Register new user

   Two types of new accounts (instructor or student) can be created using their corresponding register form. Usernames have to be unique. If a username already exists in the database, the website will display an error message prompting the user to choose another username. After the account is successfully created, the user will be shown a link to login directly.

2. Login existing user

   A user can login to the application with an existing account. An error message will be shown if the username does not exist in the database or if the password entered for the username is incorrect. The user will be redirected to the home page upon a successful login.

3. Student submitting course feedback

   Students can submit anonymous feedback for the course using the feedback form available on the student's view of the feedback page. Upon successful submission, the form's response will be reflected on the instructor's view of the feedback page. Each instructor can only view feedback for his/her own course.

4. Student submitting remark requests

   Students can submit remark requests if they are dissatisfied about their grades. They have to fill in the remark request form available on the student's view of the grades page. The remark request will be shown both to the student and all instructors upon successful submission of the form.

5. Instructor adding/modifying grades

Instructors can add or modify students' grades using the remark form on the instructor's view of the grades page. A success or error message will be shown depending on the status of the form's submission.

6. Instructor closing a remark request

Instructors are able to close (delete) a student's remark request on the instructor's view of the grades page. A success or error message will be shown depending on the status of the action.

Incomplete features

1. Instructor adding/modifying grades for students in his/her course only

We did not implement this functionality because it was not required by the assignment.
